

Laboratory Exercise 2

Create an HTML page with the following features:

1. Open your text editor and start typing the basic structure of an HTML code.

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First Webpage</title>
  </head>
  <body>
    <div>
      <h1>Title</h1>
      <p></p>
    </div>
  </body>
</html>
```

2. Place all HTML tags in the next instruction inside the <body></body> tag. **Remember to use proper indentation.**
3. Think of your favorite Anime and make it as a title of your page. Place your title in an <h1> tag.
4. In the <p> tag, give a synopsis of the Anime you choose. Minimum of 50 words.
5. Notice that the <div> tag was used to group related HTML tags together. This provides for a neater and more organized code.
6. Create a list of your top 5 favorite characters. Use ordered list. Use <h3> for the header of the list.
7. Enclose the <h3> and the list tags in a tag. Doing this allows you to group related tags together, much like <div>.
8. Lastly, add a <p> tag and write a copyright line. Use your own name.

Example:

Copyright © JEUnilongo 9-Section

To add the copyright symbol, with © or © in your code. See the line below:

```
<p>Copyright &copy; JEUnilongo 9-Section</p>
```

Or

```
<p>Copyright &#169; JEUnilongo 9-Section</p>
```

Republic of the Philippines

DEPARTMENT OF SCIENCE AND TECHNOLOGY

PHILIPPINE SCIENCE HIGH SCHOOL – SOCCSKSARGEN REGION CAMPUS

Curriculum and Instruction Division – Computer Science, Engineering, and Technology Unit

9. Save your output as **mod2-2_surname.html**. Be sure to save it as .html rather than .txt.
